

CONGRATULATIONS ON TAKING THE
FIRST STEP TOWARDS IMPLANT TREATMENT

Choosing Your New Replacement Tooth

We offer three different implant packages, this allows us to tailor your treatment to meet your individual needs. The following information will help you to decide which level is right for you.

A dental Implant replacement consists of three parts:

- 🌀 **The new crown which is the part you see in your mouth**
- 🌀 **The titanium implant which replaces the root part of the tooth**
- 🌀 **And a connector in between to keep these parts together**

The type of implant and the technique that we use when placing your implant will be the same regardless of which option you choose, it is only the crown and the connector part which differs. Sometimes, if the gum around the implant recedes over time the metal of the connector can shine through the gum – using a white coloured connector as described in the Diamond and Gold options can help to prevent this.
